

WasteCare

Environmental Policy

The WasteCare Group is fully aware of the impact any industrial process can have on the environment. We view the involvement in the waste management industry as an opportunity to be proactive in environmental matters.

This Environmental Policy Statement forms the cornerstone to the WasteCare Group environmental activities and sets out all necessary objectives and targets which Wastecare are committed to achieving. It shall be applied across all sites and divisions to the extent deemed relevant and practicable by the Group Compliance Manager. It shall encompass all staff and contract employees and shall be applied, to the extent deemed appropriate by the GEM, to suppliers and sub-contractors.

To that extent, the WasteCare Group are committed to:

- Monitoring and review of performance via the management review.
- Ensuring compliance to all of our legal and compliance obligations.
- Protecting the environment including preventing pollution.
- Continually striving to improve environmental performance.
- Reducing use of non-renewable energy sources.
- Reduction of CO² emissions.
- Reduction of our carbon footprint.
- Maximise the efficiency of operations and recycled materials.
- Compliance with the requirements of the International Sustainability and Carbon Certification (ISCC).
- ISCC certification ensures that:
 - Biomass is not produced on land with high biodiversity and high carbon stock
 - Good agricultural practices protecting soil, water and air are applied
 - Human rights, labour and land rights are respected
 - Sustainable material is traceable throughout international supply chains
 - Greenhouse gas reduction targets are met

Environmental objectives are established annually and reviewed as management review meetings.
